

## Third International Fair on Road Safety

*Riva del Garda, October 13th, 2005*

The Third International Fair on Road Safety has been organized by Automobile Club d'Italia (ACI) in Riva del Garda on 13-15 October, under the high patronage of the Presidency of the Italian Republic and the United Nations. The Fair is a reference point for all those constituencies which are - directly or indirectly - involved in the road safety issues. Furthermore, this event provides an overview of the latest achievement in this domain.

Fiat Group was one of the sponsors of this year's edition, and exhibited the research project "CarTALK 2000 - Safe and comfortable driving based upon inter-vehicle communication", co-funded by the European Commission's IST Programme. The project, which involves CRF as a partner, aims at developing co-operative driver assistance systems based on the integration of a vehicle-to-vehicle communication platform.

Iveco exhibited a Stralis Euro 5 equipped with several safety devices, already available or in the final testing phase (their features are summarized in the below table): electronic stability control, side and rear vision systems, tyre pressure monitoring, lane departure warning system, active cruise control, pre-crash system, monitoring of the drivers physical state, night-vision.
