

# INTRODUCING BULLDER.

**Parts and services  
for your trailer.**

## **A NEW BRAND FROM IVECO.**

Bullder is the new Iveco brand covering parts, servicing and repairs for trailers and drawbar units.

Based on its experience as an established manufacturer in road transport, Iveco has selected the leading suppliers in the trailer industry to market their products under the Bullder brand. An entirely new concept, designed with the customer in mind and available from the Iveco Service network.

# GREAT ADVANTAGES.

## SAVE TIME WITH BULLDER.

Thanks to Bullder, from now on you can find parts for your trailer or drawbar unit at your local Iveco Dealer. Servicing and maintenance work can be completed on both tractor unit and trailer in one visit, thus maximizing vehicle uptime.

## BULLDER IS BORN OUT OF EXPERIENCE.

Put your trust in Bullder: parts for trailers and drawbar units with the quality of Origin 100% Iveco parts.

In addition, the distribution and logistics channels within the Iveco network guarantees rapid, prompt delivery in order to maximise parts availability levels.

## A NETWORK BASED ON EXCELLENCE AT YOUR SERVICE.

The Iveco network of professionals is at your service with Bullder. For the first time, Iveco has made its range of products and services and comprehensive service network available for trailers and drawbar units, providing a total service for your vehicle requirements.

# QUALITY AND SAFETY GUARANTEED.

## CAREFULLY SELECTED PRODUCTS.

Bulder parts are marketed with extreme care, in line with the Iveco tradition. We have selected the leading manufacturers in the industry as our official suppliers in order to guarantee products with the highest quality and performance characteristics..

## INDUSTRY LEADING GUARANTEE.

The Bulder parts warranty benefits from the same terms and conditions as standard Iveco parts, assuring you of the same quality standards for the trailer as for the tractor unit.

# AIR SPRINGS

Air springs are essential for keeping the trailer at a constant height whilst protecting the load against impact and stress in all driving conditions. Bullder air springs are specially designed to cope with variations in the weight of the trailer load and to withstand constant stress.

# SHOCK ABSORBERS

Efficient shock absorbers are essential for the stability and road holding of the trailer.

Their function is to dampen the vibrations of the suspended body resulting from the movement of elastic elements in the suspension system, keeping the wheel on the ground in order that the tyre adheres to the road surface in all conditions.

# BRAKE PADS

Brake pads are designed to provide a constant coefficient of friction from the very first brake application up to the highest operating temperatures, resulting in the even distribution of heat and avoiding premature disc replacement.

Bullder brake pads provide maximum braking efficiency and reliability for longer than average service intervals and product life.

# REAR AND MARKER LIGHTS

The first trailer and drawbar unit light with a transparent lens, allowing the use of new LED bulbs with connection fittings exactly the same as on standard bulbs.

The bulb holders are cushioned to further resist the stresses of road use. The internal connections are designed to guarantee a perfect, watertight seal.

LED technology gives better visibility and a considerable reduction in current input.
