## ENGIE and IVECO inaugurate a new natural gas refueling station

**A new natural gas refueling station for heavy vehicles in the IVECO headquarters in East Turin.**

Following the agreement signed in 2017 between ENGIE Italia, energy and services player driven by the mission of leading the transition to CO<sub>2</sub> zero emission, and IVECO, launch today a brand new state-of-the-art gas refueling station.

Located on CNH industrial Headquarters, Strada delle Cascinette in the strategic East part of Turin, at the crossroads of the transport network (highways, ring road, etc.), developed on an area of over 5 thousand square meters and built specifically for heavy vehicles, it consists of **2 LNG dispensers (Liquefied Natural Gas) and 4 of CNG (Compressed Natural Gas)**, as well as some charging stations for electric vehicles powered by a photovoltaic system located on the roof.

The station will be open to all types of natural gas vehicles from 6 to 21, Monday to Friday.

Today, the project is a reality, realizing **ENGIE's** commitment to contributing to the development of green mobility, focusing on alternative fuels such as electricity and natural gas, and also **IVECO's** commitment in its role as leader in the field of natural gas vehicles. The IVECO ORECCHIA dealership, the reference IVECO dealer for the Province of Turin and Valle d'Aosta, near to the station, will support customers in the transition towards green mobility with a complete service (sale, assistance and, now, refueling).

The enormous advantage of natural gas compared to diesel, GPL or heavy fuels is represented by the reduction of 95% of fine particles (PM), 90% of nitrogen dioxide (NO<sub>2</sub>) as well as a significant reduction of emissions of CO<sub>2</sub>.

**Mobility alone accounts for 20% of global energy consumption, 24% of global CO<sub>2</sub> emissions and 95% dependence on oil. Sustainable mobility is therefore a fundamental driver on the road to the zero-carbon transition.**

*“ENGIE's goal is to implement solutions with a view to decarbonizing and this project is an example of that. - said **Matthieu Bonvoisin, director of the Infra Energy Business line of ENGIE Italia** - In Northern Italy, there is a very high level of CO<sub>2</sub> emissions. 50% of these emissions are produced by private heating, 25% by industries and 25% by transport <sup>1</sup>. The development of a network of LNG refueling infrastructures allows to decrease the polluting effects for heavy transport. In addition to reducing the environmental impact, this solution also allows a reduction in noise pollution, as the vehicles powered by LNG show greater silence than those powered by diesel. ENGIE has twenty years of activity in over 160 service stations in Europe. This project expresses the desire to strengthen our expertise in sustainable mobility in Italy”.*

*“IVECO has pioneered natural gas technology in transport and been instrumental in the development of the distribution network. Natural gas - **added Fabrizio Buffa, IVECO Gas Business Development Manager** - is the mature solution immediately available to decarbonize long haul, and this agreement with ENGIE for the opening of new refuelling stations is part of our holistic approach to green transport. We believe that it is crucial that all the players in the sector work together in order to achieve truly sustainable transport in the timeframe driven by regulations to address Climate Change”.*

The 2017 Memorandum of Understanding (MOU) between ENGIE and IVECO aims to expand the various joint projects: from France (in the IVECO headquarters in Trappes), passing through the United Kingdom (in the port of Immingham), to Romania (for a demonstrator at Alba Lulia). At the same time, work on Italian soil continues: ENGIE is working on three other L-CNG station projects in northern Italy, in addition to the installation of dozens of electric charging points throughout the territory.

#### **ENGIE ITALIA**

In Italy, we provide global offerings across the entire energy value chain, from supply to service, with a focus on innovative products and energy efficiency and integrated management solutions. Guided by the objective of assisting communities and businesses in the transition to zero CO<sub>2</sub> emissions, we offer solutions that reconcile individual and collective interests.

With over 3,600 employees in more than 60 offices throughout the country, we are the first operator in energy services, the second in gas sales (wholesale market), the third operator in district heating and public lighting and fifth in electricity. ENGIE is present in all segments, from residential to tertiary, public and private, up to small and large industry.

## ENGIE

Our group is a global reference in low-carbon energy and services. In response to the urgency of climate change, our ambition is to become the world leader in the zero-carbon transition "as a service" for our customers, in particular global companies and local authorities. We rely on our key activities (renewable energy, gas, services) to offer competitive turnkey solutions.

With our 160,000 employees, our customers, partners and stakeholders, we are a community of Imaginative Builders, committed every day to more harmonious progress.

## IVECO

IVECO is a brand of CNH Industrial N.V., a global leader in the capital goods sector, listed on the New York Stock Exchange (NYSE: CNHI) and on the Mercato Telematico Azionario, organized and managed by Borsa Italiana (MI: CNHI). IVECO designs, builds and markets a wide range of light, medium and heavy commercial vehicles, quarry / construction site vehicles.

The wide product offer includes the Daily, a vehicle that covers from 3.3 to 7.2 tons of total weight on the ground, the Eurocargo, from 6 to 19 tons, for the heavy segment over 16 tons, the Trakker (dedicated to off-road activities) and the IVECO WAY range with the IVECO S-WAY version for on-road missions and IVECO X-WAY for light off-road missions. Furthermore, with the IVECO Astra brand, it builds quarry-construction vehicles and special vehicles.

IVECO employs approximately 21,000 employees and produces vehicles equipped with the most advanced technologies in 7 countries in the world, in Europe, Asia, Africa, Oceania and Latin America. 4,200 sales and service outlets in more than 160 countries guarantee technical support wherever an IVECO vehicle is at work.
